Registrar-General of Ontario.

REPORT UPON

Births, Marriages and Deaths

FOR THE YEAR 1916

The Forty-seventh Annual Report of Vital Statistics for the Province of Ontario is herewith presented.

POPULATION.

The estimated population of Ontario for the year 1916 is 2,776,885 divided as follows: Cities, 36.72 per cent.; towns, 5.76 per cent., and rural municipalities, 57.62 per cent. This is an estimated increase in the population for the year of 9,535 or .34 of one per cent. The increase in the population during the year 1914 was 2.62 per cent.; this fell to 0.63 per cent. in 1915 and again to .34 per cent. in 1916, and may be ascribed to the disturbed conditions of the country, owing to the great conflict in Europe.

BIRTHS.

The following table shows the number of birth registrations for 1916 and allows of a comparison between those of 1915 and 1916:—

	1916	Ratio	1915	Ratio
Entire Province	65,264	23.5	67,032	24.2
Cities	26,938	26.4	27,283	24.8
Towns	4,687	29.7	33,862	30.0
Rural municipalities	33,639	21.0	35,887	22.1

The natural increase, i.e., births over deaths, was 19,684.

The number of births decreased by 1,768 and the ratio per 1,000 of population by .7.

The relation of male births to female births was as follows:

	Male	Female		M	to	F
Entire Province	33,663	31,601	or	106	to	100
Cities	13,928	13,010	"	107	"	100
Towns	2,438	2,249	"	108	"	100
Rural municipalities	17,297	16,642	"	103	"	100

Illegitimate Births.

The number of illegitimate births registered was 1,365, being 105 less than for 1915. This gives a rate of 20.9 per 1,000 births, which is 1.0 less than that of the previous year.

The rate may be shown as follows:

Entire Province	20.9	per	1,000	births
Cities	31.8	"	1,000	"
Towns	19.4	"	1,000	"
Rural Municipalities	7.8	"	1,000	"

There is a widespread idea that illegitimacy is much more prevalent during a war time than under normal conditions. Such does not seem to be the case in Ontario. It is admitted that from the data available in the belligerent countries that there is a *slight* increase, but that is not at all remarkable I quote from a brochure entitled "Illegitimacy in Europe as affected by the war," by Emma O. Lundberg, Federal Children's Bureau, Washington. This remark occurs: "Such figures as are available indicate that the actual number of both legitimate and illegitimate births have decreased since the war, but the decrease in the number of illegitimate births has been considerably less in proportion than the decrease in the number of legitimate births. Hence there has been a slight rise in the ratio of illegitimate to total births. The evidence obtainable does not bear out the reports that have been circulated of widespread increase of illegitimacy." The rate of illegitimacy to total births for the last five years has been as follows: 1912, 21.3; 1913, 26.6; 1914 (the year of the war) 22.1; 1915, 21.9; 1916, 20.9. Thus it will be seen that the rate in Ontario is actually lowered since war began.

Multiple Births.

The number of pairs of twins registered in 1916 was 704, consisting of 726 boys and 682 girls. The cases of triplets were 11, consisting of 16 boys and 17 girls.

MARRIAGES.

The number of marriages registered in 1916 was 23,401, being at the ratio of 8.4 per 1,000 of the population, or 16.8 persons married per 1,000 of population. There were 105 fewer marriages; the rate, however, fell but 0.1.

There were married in cities 11,799 or 50.4 per cent.; in the towns, 1,827 or 7.8 per cent.; and in the rural municipalities, 9,775 or 41.8 per cent. The rates were as follows: cities, 11.5; towns, 11.5; rural municipalities, 6.1 per 1,000 of population.

The same ratio appeared in 1911, from which date there was a decrease till the lowest point was reached in 1913 and 1914 (85); there has been a slight increase in 1915 and 1916.

The following is an analysis of rates in city, town and rural municipalities:—

INFANT MORTALITY.

The number of deaths of infants under one year old has increased by 162, which makes the death rate 107 per 1,000 births. This is an increase of 5 over that of last year.

The following table gives an analysis of rates:—

	Births.	Deaths under 1.	Rate per 1,000 births.

A complete analysis of causes of deaths of infants under one, as well as for all deaths of infants under five years of age, will be found in Table 13.

Still births are in all cases excluded.
